

Section 1 Introduction:

- 1. The evolution of the assisted reproduction technologies***
- 2. The effect of chemotherapy on the human reproductive system***
- 3. The effect of radiotherapy on the human reproductive system***
- 4. The need for fertility preservation in cancer patients***

Section 2 Reproductive biology and cryobiology:

- 5. Life and death in the germ line: apoptosis and the origins of DNA damage in human spermatozoa***
- 6. Principles of vitrification as a method of cryopreservation in reproductive biology and medicine***

Section 3 Fertility preservation in cancer and non-cancer patients:

- 7. Fertility preservation in non-cancer patients***
- 8. Fertility preservation in women with ovarian endometrioma: from surgery to oocyte and ovarian tissue freezing***
- 9. Pediatric cancer therapy and fertility***
- 10. Breast cancer therapy and fertility***
- 11. Fertility preservation in young adults with gastrointestinal and hematological malignancies***

Section 4 Fertility preservation strategies in the male:

- 12. Transplantation of cryopreserved spermatogonia***
- 13. Cryopreservation and grafting of immature testicular tissue***
- 14. Use of cryopreserved sperm and ART after chemotherapy or radiotherapy***

Section 5 Fertility preservation strategies in the female: medical/surgical:

- 15. Use of GnRH analogs for prevention of chemotherapy-induced gonadotoxicity***
- 16. Ovarian transposition before radiotherapy Yaron Gill and Togas Tulandi***
- 17. Fertility-saving surgery for gynaecological cancers***
- 18. Results of conservative management of ovarian malignant tumours***

Section 6 Fertility preservation strategies in the female: ART:

- 19. Embryo cryopreservation as a fertility preservation strategy***
- 20. Vitrification of human oocytes as a fertility preservation strategy***
- 21. Autotransplantation of cryopreserved ovarian tissue: techniques and results***
- 22. ART and oocyte donation in cancer survivors***

Section 7 Ovarian cryopreservation and transplantation:

- 23. Ovarian cryopreservation and transplantation: overview***

24. Cryopreservation of ovarian tissue by vitrification: techniques and results

25. Ovarian tissue cryopreservation

26. Risk of transplanting malignant cells in cryopreserved ovarian tissue

27. Whole ovary freezing and transplantation

Section 8 In-vitro follicle culture:

28. Molecular and cellular integrity of cultured follicles

29. In-vitro growth of human oocytes

30. Contributions of ovarian stromal cells to follicle culture

31. In-vitro maturation of germinal vesicle oocytes

32. Survival of primordial follicles: tips and tricks

Section 9 New research and technologies:

33. The artificial ovary

34. Uterus transplantation: research and clinical possibilities

35. Ovarian allotransplantation

36. Allotransplantation of human ovarian tissue

37. Predicting ovarian futures: the contribution of genetics

Section 10 Ethical, legal and religious issues:

38. Fertility preservation: ethical considerations

39. Legal issues of fertility preservation

40. Christian ethics in fertility preservation.
