

Section 1 Basic Sciences

General principles of pharmacology

Data, statistics and clinical trials

Inhalational anaesthetics and medical gases

Intravenous anaesthetics and sedatives

Local anaesthetics

Pain

Nausea and vomiting

Muscle function and neuromuscular blockade

Cardiovascular system

Respiratory system

Renal system

Fluid, electrolyte and acid-base balance

Metabolism, the stress response and thermoregulation

Blood, coagulation and transfusion

Section 2 Physics and Apparatus

Basic physics

Equipment

Clinical measurement and monitoring

Section 3 Fundamentals of Anaesthesia & Perioperative Medicine

Quality and safety

Preoperative assessment

Coexisting disease

Consent and information

The practical conduct of anaesthesia

Airway management

Pain management

Local and regional anaesthesia

Complications

Management of critical incidents

Resuscitation

Postoperative care

Section 4 Clinical Anaesthesia

The high-risk surgical patient

The older surgical patient

The obese patient

Paediatric anaesthesia

Day surgery

General, gynaecological and genitourinary surgery

Orthopaedic surgery

ENT, maxillofacial and dental surgery

Ophthalmic surgery

Vascular, endocrine and plastic surgery

Neurosurgery

Thoracic surgery

Cardiac surgery

Obstetric anaesthesia and analgesia

Emergency and trauma surgery

Anaesthesia in low and middle-income areas

Anaesthesia outside the operating theatre

Organ transplantation

Intensive care medicine
